PROJECTS

- **Gadgets information** website using PHP, Bootstrap, HTML, CSS, JavaScript.
- **Omni food website** This is a fully responsive website that I have made while I was learning deep about HTML, CSS, and also responsive design using HTML, CSS.
 - **Live demo link** - <https://affectionate-bardeen-6451a6.netlify.app/>
- **Amazon clone** using react app, firebase authentication, payment gateway, and some node libraries. For the frontend, I have used ReactJS and for the backend, I have used firebase-function for payment method I have used stripe for authentication I have used firebase-authentication for database I have used firebase-cloud store, and for animations, I have used react-slick-carousel, AOS(Animate On Scroll Library). And deployed on netlify.
 - **Github link for this project** - <https://github.com/React-JS-clones/amazon-clone>

- **Live demo link** - <https://mystifying-lamport-5e8683.netlify.app/>
- **A real-time chat web application** created with react app using socket.io, express. I have used ReactJS for the frontend and socket.io for the backend. Deployed on netlify and used Heroku for backend deployment. A real-time chat application in which you can join with your name and room id and you can chat with your friends.
 - **Github link for this project** - <https://github.com/krunal333/chat-app>
 - **Live demo link** - <https://nifty-brattain-a10e85.netlify.app/>
- **Free Gyan website** In this project, I have used HTML, CSS, Python, Flask, MongoDB. I have scraped 2 websites(Coursera, Lynda) for this project. This website will help to find any course. In this user can find multiple courses which are available in multiple websites they can find it in one website.
